

A Green Dream

VICTORY HOMES

California Green Builder Residential Project

Cypress

Victorville, CA

Builder: Victory Homes

WHAT THE JUDGES SAID: While all three projects deserve a great deal of credit for utilizing green building products and technology, we felt the Victorville home deserved the highest praise due to the extra challenges the builder faced. The extreme climate, the budget constraints of being an entry-level home and the additional burden of not being located in a major metropolitan area with an existing awareness of green building concepts convinced us that this project deserved special recognition. Out of necessity, this builder also trained local trades-people on green building techniques, which leaves this community better equipped to provide for the next environmentally sensitive building project. An admirable benefit and a winning combination! (Photos courtesy Victory Homes) ▶
